func.

BUILD THE BRIDGE TO THE NIGHT.

An implementation guide for the product we are actually building — and the production gates still ahead.

PROTOTYPE + FUTURE VISION

01 / CURRENT TRUTH

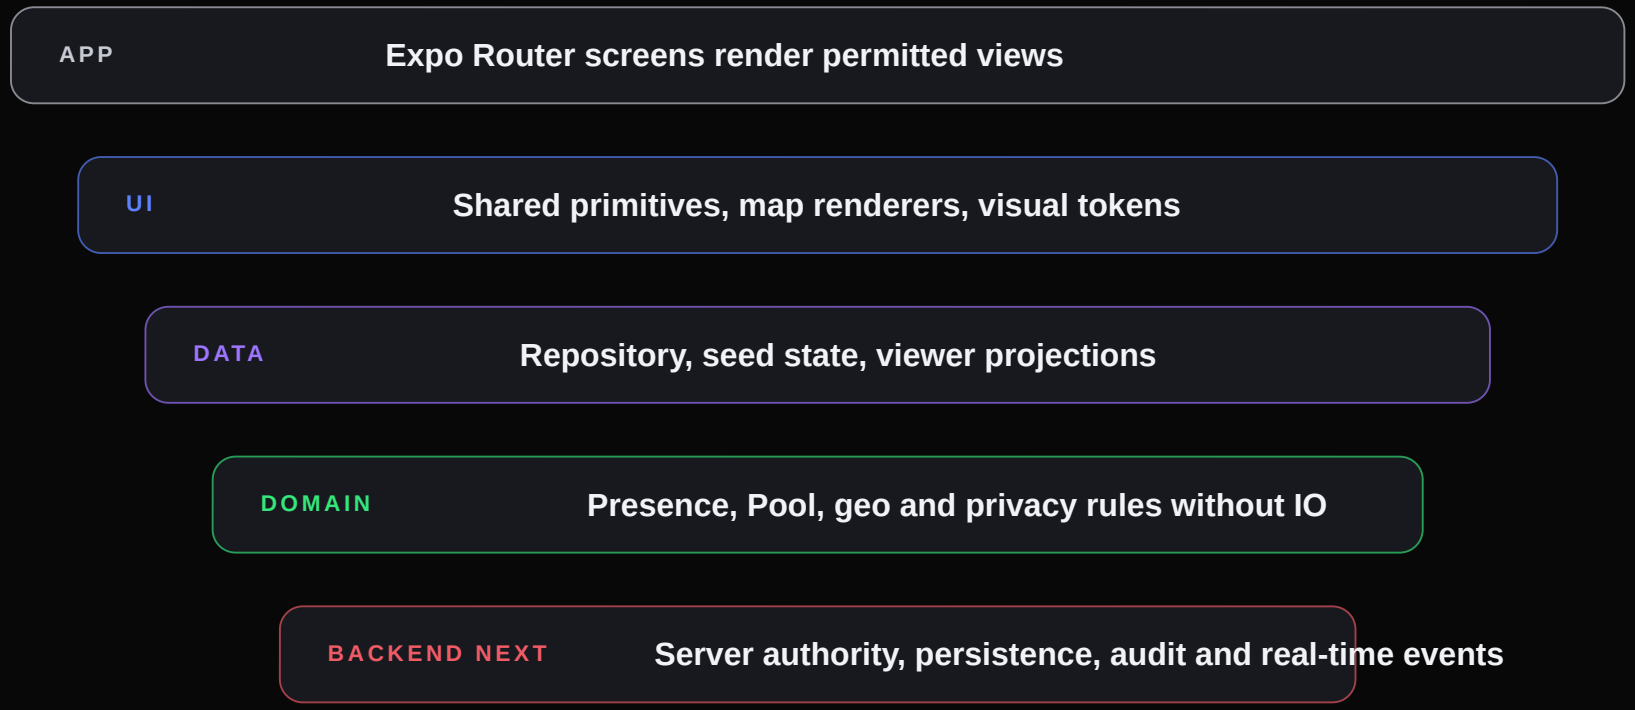

A credible prototype — not a production app.

The distinction is a requirement, not a disclaimer to hide.

WORKING	**Map, globe, presence, privacy projections, Pool, requests, acceptance, chat, venue personas**
SIMULATED	**People, friendships, locations, verification and all data are seeded on-device**
ABSENT	**Auth, backend, persistence, server redaction, moderation, rate limits, auditability**

The current seams are worth preserving.

Pure rules, safe projections, and a swappable repository give the prototype a professional centre.

Guardrail: screens never reach past the viewer projection.

Every feature has a status, not just a name.

The feature matrix separates current prototype behaviour from launch gates and future exploration.

MAP	map, pins, globe, discovery	PROTOTYPE BUILT
PRESENCE	DTF / Casual / Off, friend disclosure	PROTOTYPE BUILT
POOL	create → request → accept → chat	PROTOTYPE BUILT
BUSINESS	opaque venue persona + verified event	SIMULATED
SAFETY	auth, verification, report, block, moderation	LAUNCH BLOCKER

Disclosure is calculated for the viewer.

The visual system cannot be allowed to invent a more revealing view.

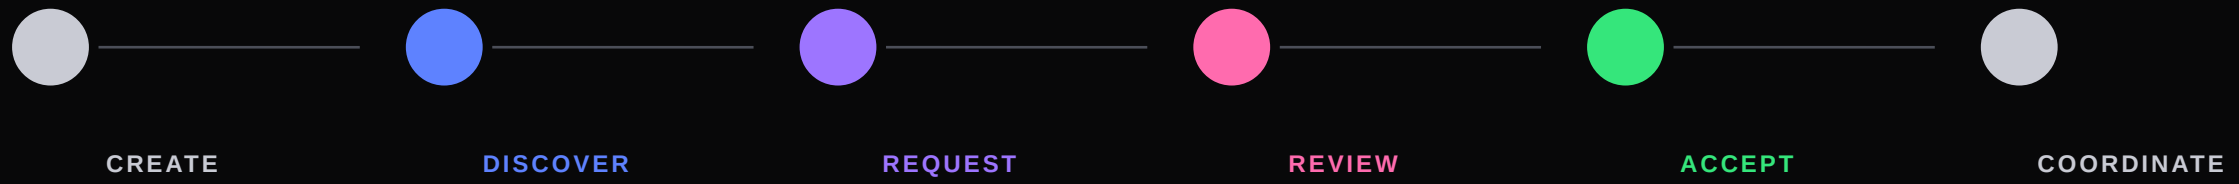

SELF	exact current fix
QUALIFYING FRIEND	exact fix under DTF rules
MUTUAL	anonymous venue glow only
UNRELATED	no person disclosure
PRIVATE PLAN OUTSIDER	safe area / neutral absence

SERVER RULE

Raw locations never arrive in a generic payload to be filtered later.

A small state machine with real safety consequences.

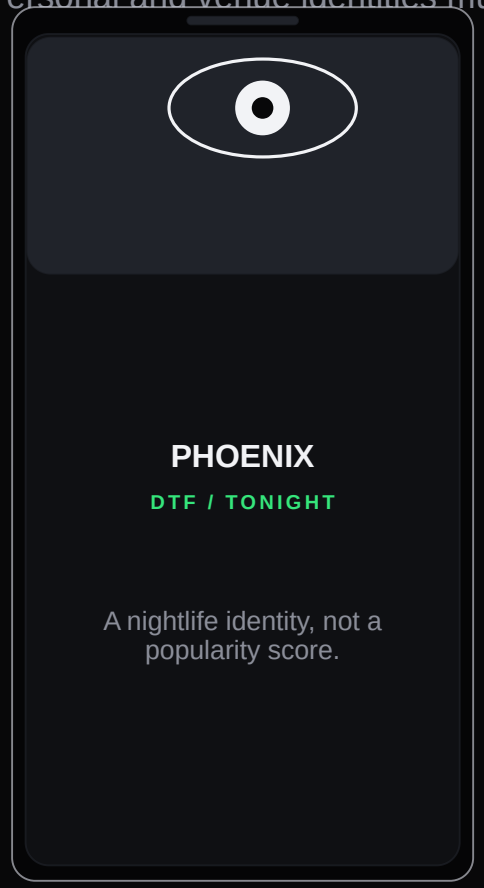

Pool is not a permanent group product. It is bounded access and coordination.

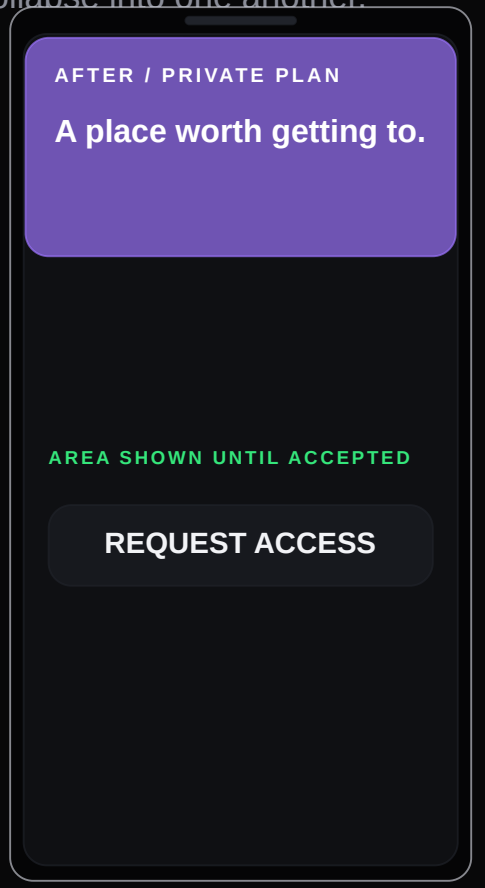

Atomic acceptance • capacity re-check • private reveal only after authorisation • idempotent commands

Identity persists through the conversation.

Personal and venue identities must never collapse into one another.

PERSONAL IDENTITY

VENUE PERSONA

THREAD

Only authorised participants can read it.

Unknown or malformed access returns neutral absence.

A verified business is a separate accountable identity.

Business is a supply-side extension of Pool, not a secret operator profile.

VERIFIED VENUE

Publish a known-venue opportunity.

The operator remains private behind the venue persona.

- VERIFICATION AUTHORITY
- OPERATOR ROLES
- VENUE OWNERSHIP
- PUBLISHING RULES
- APPEALS + REVOCATION
- BUSINESS MODERATION

Real users are blocked until the operating system exists.

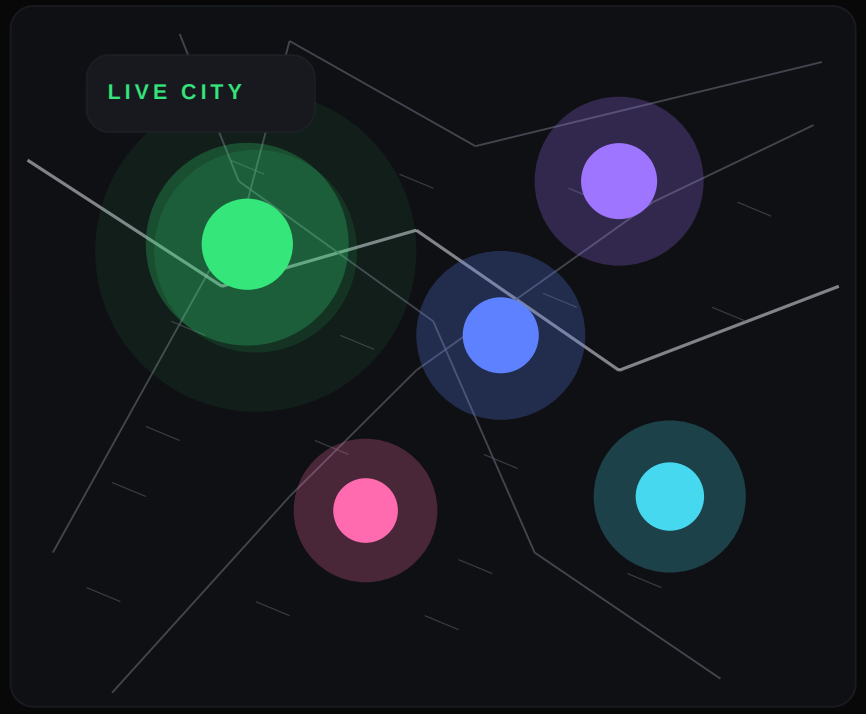

Safety gates are product requirements, not post-launch polish.

- 18+ IDENTITY VERIFICATION
- SERVER-SIDE REDACTION
- REPORT + BLOCK
- MODERATION QUEUE
- RATE LIMITS
- AUDIT TRAIL
- APPEALS + INCIDENT RESPONSE

No real people. No real locations. No public pilot until Gate 1 is independently reviewed.

The visual target is a product world, not a skin.

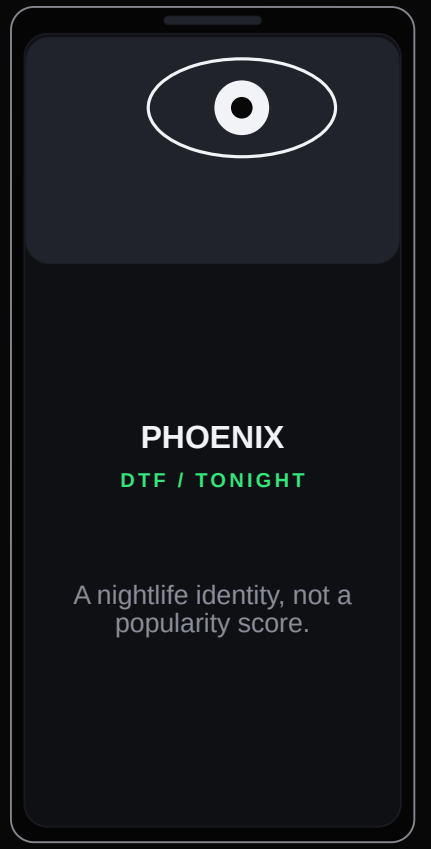

Bright living map inside a premium black-and-silver instrument.

BLACK / GLASS / CHROME / LIVE EMERALD

MAP / FUTURE VISION

IDENTITY / FUTURE VISION

Motion should make the city physical, not the user captive.

Spring-like interaction, quiet ambient energy, clear reduced-motion equivalents.

01

LOGO

02

EYE

03

EARTH

04

DIVE

05

CITY

06

MAP

120–180ms micro • 240–420ms component • 600–900ms spatial • 1.8–2.8s hero

One bounded slice, one evidence gate.

Do not combine design ambition, backend risk, and product uncertainty into one context.

01

TRUTH LOCK

Bible, PRD, tracker, open decisions

02

USER EVIDENCE

10–15 moderated core-loop sessions

03

FOUNDATION

Auth, privacy, Pool, messaging, safety

04

ALPHA

One city, trusted supply, manual support

05

EXPAND

Only evidence-led features

The unresolved questions are named, not hidden.

A professional team can work quickly when the boundaries are honest.

NAV	final navigation names
PASS	confirmation or credential?
BUSINESS	first business capability
STORIES	text scaffolding or media product?
PET	future idea or retire?
VISUAL	type, black, colour, opening asset

A developer should not need hidden chat history.

The source-of-truth pack is the product contract around the code.

- BIBLE — WHY FUNC EXISTS
- PRD — WHAT EACH FEATURE DOES
- FEATURE MATRIX — STATUS AND GATES
- PRIVACY + SAFETY — WHAT CAN BE SEEN
- DESIGN SYSTEM — HOW IT SHOULD FEEL
- API CONTRACT — PRODUCTION SEAMS
- OPEN DECISIONS — WHAT PHOENIX MUST CHOOSE

func.

MAKE THE CITY LEGIBLE.

Then make it safe enough to trust.
