func.

THE LIVE LAYER FOR GOING OUT

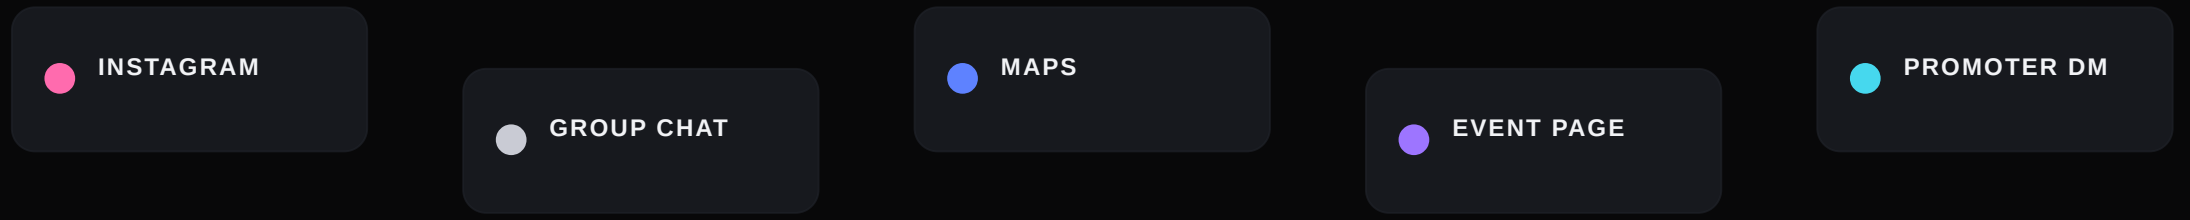

Func turns a fragmented night into one clear, living opportunity.

VISION PACKAGE / PROTOTYPE + FUTURE DIRECTION

The night is fragmented.

The information exists. The decision still does not.

What is happening? **Who is open?** **Can I participate?** **Is it trustworthy?**

A living map, not another feed.

Func is the bridge between discovery and a real night out.

MAP / FUTURE VISION

OPPORTUNITIES

Places, events, and access first.

People only when they choose to be visible. Live energy without unsupported precision.

Five deliberate steps from uncertainty to a night out.

The product is the loop, not the feature count.

DISCOVER

See what is actually on.

UNDERSTAND

Read the context, cost, and trust.

REQUEST

Choose a safe next step.

ACCEPT

The host decides.

GO OUT

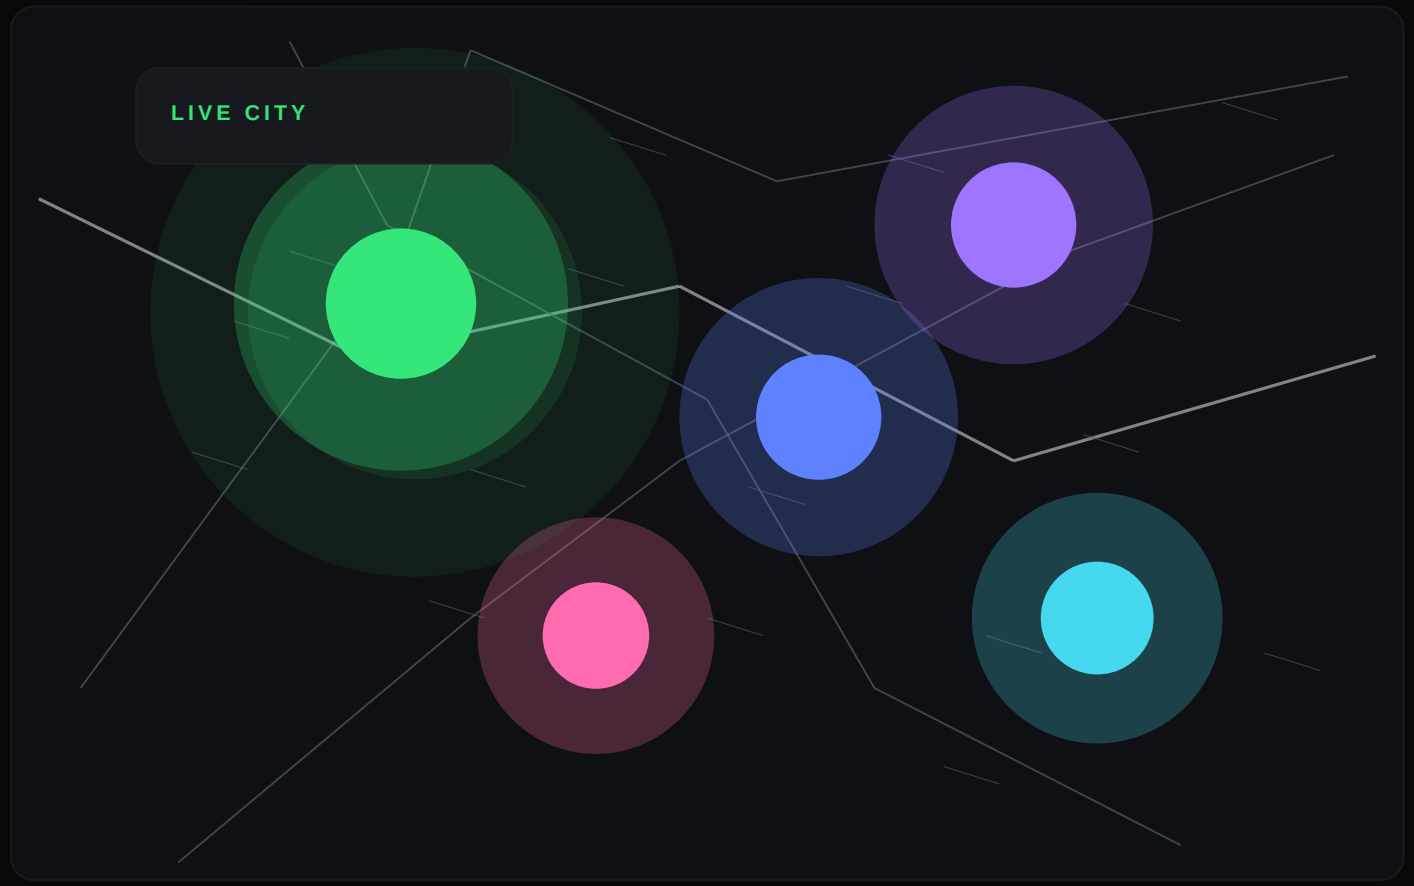

Func gets out of the way.

NORTH-STAR OUTCOME

A successful night enabled — not minutes spent in the app.

The city becomes the interface.

A premium instrument around a bright, living city.

LIVE ENERGY

Glow, never false precision.

PRESENCE

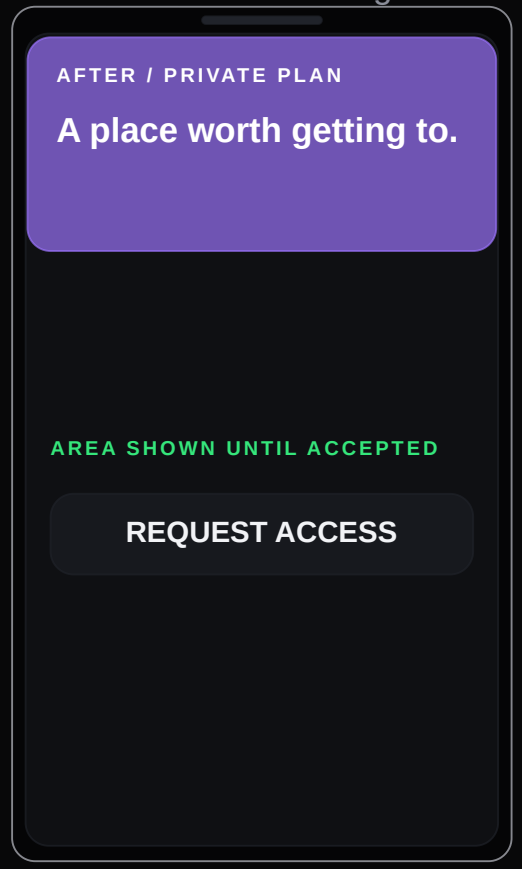

Opt-in, nightly, self-expiring.

ACCESS

Opportunity becomes actionable.

Pool makes “maybe” actionable.

A host decides. The user gets a clear, safe state.

PRIVATE PLAN / FUTURE VISION

THE ACCESS MODEL

Request → accept → coordinate.

Party size is information on a request, not a permanent group to administer.

PRIVATE PLACE

The exact address stays protected until the correct acceptance state.

The prototype demonstrates this flow with seeded data. Production requires server-side enforcement, verification, moderation, and auditability.

Trust is part of the product, not a settings page.

The visual promise only matters if the operating system underneath it is real.

OPT-IN

No person appears without choosing tonight.

PROJECTED

Every viewer receives only the permitted view.

ACCOUNTABLE

Hosts and businesses have real identity paths.

RESPONSIVE

Report, block, moderate, escalate.

The current prototype models the privacy behaviour. It does not yet provide production security.

07 / POSITION

The wedge is the specialised nightlife graph.

Competitors can copy individual features. The system becomes defensible through density and trust.

Instagram	content + social graph	**night-specific intent + access**
Google Maps	places + navigation	**people, atmosphere + participation**
Partiful	event coordination	**discovery before the invitation**
Snap Map	friend/place map	**actionable, safety-led nightlife context**

Working hypothesis — not yet a proven moat.

There is a real product to build on.

The prototype proves behaviour and architecture — not yet demand or production readiness.

MAP	Mapbox globe, local map, discovery, pins and clustering
POOL	Create, request, review, accept, reveal and chat flows
PRIVACY	Viewer-relative projections for people, venues and private plans
HONEST LIMIT	No backend, auth, persistence, moderation or server security

147 CASES / 144 PASSING / 3 KNOWN RESIDUALS

The next milestone is trust infrastructure.

Professional production work starts behind the screens.

01	02	03	04
TRUTH + DEMAND	**PRODUCTION FOUNDATION**	**CONTROLLED ALPHA**	**DENSITY + EXPANSION**
User sessions, core-loop evidence, final launch slice	Auth, verification, server privacy, Pool state, messaging, moderation	One city, adult cohort, trusted supply, manual safety operations	Media, business tools, premium and more cities only when earned

Start dense, not everywhere.

San Francisco is the prototype/pilot world. Los Angeles is the next intended market.

PILOT

SAN FRANCISCO

One concentrated nightlife graph, observed closely.

NEXT

LOS ANGELES

Expansion after the loop earns density and trust.

Free for people. Valuable to accountable venues.

The business model is a hypothesis to validate after consumer utility is real.

CONSUMERS

A free map and access layer for the night.

BUSINESSES

Verified identity, event publishing, request handling and future visibility tools.

BOUNDARY

Func promotes and connects. It does not take ticket money in the current direction.

Willingness to pay remains unvalidated.

Capital buys the production foundation and the first honest test.

The amount should be set after professional technical scoping, not invented for the slide.

01	MAKE IT SAFE	Auth, ID/business verification, server privacy, moderation and auditability
02	MAKE IT USABLE	Complete the visual system and production-quality core loop
03	MAKE IT OBSERVABLE	Controlled alpha, evidence, support and incident response

ASK AMOUNT / RUNWAY: TO BE COSTED WITH TECHNICAL LEAD

func.

A REAL NIGHT OUT IS THE PRODUCT.

Func makes the city legible — then gets out of the way.
